# TEAM BLUE

## 1. Project Objective

Our goal is to collaboratively develop and improve the assigned website using Git and GitHub. Each team member will be responsible for a specific section of the website. We will use GitHub branches and Pull Requests to manage everyone's work and combine the completed sections into the main branch.

Our workflow: Clone → Create Branch → Develop → Commit → Push → Pull Request → Review → Merge

## 2. Team Structure & Task Assignments

### Naomi Gabriel — Integration

**Branch:** feature/branding

**Responsibilities:**

- Coordinate the entire team.
- Maintain the overall website structure.
- Handle branding and overall visual consistency.
- Coordinate the integration of everyone's work.
- Review Pull Requests.
- Resolve merge conflicts where necessary.
- Conduct final testing before submission.
- Ensure the final website works properly on desktop and mobile.

**Boundary / Focus:** Website branding; overall consistency; navigation/structure where necessary; GitHub coordination; final integration.

### Moses — Homepage / Hero Section

**Branch:** feature/homepage

**Responsibilities:**

- Develop the main homepage section.
- Work on the navigation bar, hero section, main headline, supporting text, CTA buttons, homepage layout, and basic responsive styling.
- Ensure the hero communicates who the organization/company is, what they do, and a clear call to action.

**Boundary / Focus:** Do not modify the About, Practice Areas, or Contact sections unless instructed.

### Salima — About Us / Team Section

**Branch:** feature/about-team

**Responsibilities:**

- Develop the About Us section.
- Work on company/firm background, mission, vision, values where applicable, and team/lawyer profiles if included.
- Create a professional and organized layout.

**Boundary / Focus:** Do not redesign the homepage or modify Practice Areas/Contact unnecessarily.

## Sarah — Practice Areas / Services

**Branch:** feature/practice-areas

**Responsibilities:**

- Develop the Practice Areas/Services section.
- Work on the heading, service cards, descriptions, icons where appropriate, layout, hover effects, and responsive design.
- Use a clear structure such as Icon → Service Name → Short Description.

**Boundary / Focus:** Do not modify other people's major sections unless necessary.

## Acha K. Excel — Images & Visual Assets

**Branch:** feature/images

**Responsibilities:**

- Review and improve images used throughout the website.
- Work on hero images, team/profile images, section images, background images, sizing, positioning, and responsiveness.
- Replace imagery that does not appropriately represent the intended audience/brand with suitable imagery.
- Keep images relevant, professional, appropriately representative of Black/African people where people are depicted, properly sized, and correctly loaded.
- Keep images organized in the appropriate assets/images folder and use meaningful filenames.

**Boundary / Focus:** Do not completely redesign another person's section or delete images without informing the team.

## Emmanuel Michael — Contact Section & Footer

**Branch:** feature/contact-footer

**Responsibilities:**

- Develop the Contact and Footer portions of the website.
- Include contact heading, phone, email, office/location, contact form, CTA, and map/location information where required.
- Include company name, navigation links, contact information, social links where available, and copyright information in the footer.
- Ensure links are clickable and the section is responsive.

**Boundary / Focus:** Make sure email/phone links work where appropriate and text is properly aligned.

### Godwin Daniel — QA / Testing

**Branch:** feature/qa-testing

**Responsibilities:**

- Test the website and identify problems.
- Check desktop, tablet, and mobile layouts.
- Test navigation, images, buttons, links, contact form, spacing, alignment, and responsiveness.
- Document bugs clearly and make appropriate fixes through the QA branch.

**Boundary / Focus:** Use the bug-report format in this document.

## 3. GitHub Rules for Everyone

- Never work directly on main. Your work should happen on your assigned branch.
- Before starting work, get the latest version of main.
- Create and use your assigned feature branch.
- Work only on your assigned task and avoid unnecessary changes to another person's section.
- Commit regularly with clear commit messages.
- Push your branch to GitHub.
- Create a Pull Request from your branch into main.
- Do not merge your own Pull Request. Naomi will review it before merging.

## 4. Pull Request Process

1. Go to GitHub and open the repository.
2. Find your branch and click Compare & pull request.
3. Make sure the destination is base: main and your branch is the source.
4. Add a short description of your work.
5. Create the Pull Request.
6. Notify (Me) Naomi in the group.
7. Wait for review and any requested changes before merging.

## 5. Pull Request Description Template

What I worked on

- Added/updated my assigned website section.
- Implemented the required styling and functionality.

Testing

- Tested on desktop.
- Tested on mobile.

Notes

- List any known issues or anything the reviewer should be aware of.

## 6. Team Communication Rule

If you need to change something outside your assigned section, tell the team first. This helps prevent two people from unknowingly editing the same part of the project.

## 7. Final Project Checklist

- Homepage works.
- Navigation works.
- About section works.
- Team section works.
- Practice Areas work.
- Images load correctly.
- Contact section works.
- Footer works.
- Desktop, tablet, and mobile views have been checked.
- Everyone created a branch, committed work, pushed their branch, and created a Pull Request.
- Naomi reviewed and merged approved Pull Requests.
- No obvious broken links, missing images, major alignment issues, duplicate code, or unresolved merge conflicts remain.
- The final main branch runs correctly.

## 8. QA Bug Report Format

Use this format when reporting a problem:

BUG #001

Section: Homepage

Problem: Hero button is not properly aligned on mobile.

Device: Mobile

Expected: Button should remain inside the hero section.

Actual: Button extends outside the section.

Status: Needs fixing

## 9. Team Objective

The goal is not simply to finish the website. We should also demonstrate that we understand how a real development team collaborates using Git, GitHub, branches, commits, Pull Requests, code review, and QA. Everyone should understand their contribution and be able to explain what they worked on.

💙 **Build separately. Review together. Deliver as one team.**
